BDT

INTEGRATED SYSTEM

FIREARMS, TACTICAL CLOTHING,
SCOPES, AIMING SYSTEMS

These founding companies of Beretta Defense Technologies produce some of the finest weaponry and equipment in their category. They have taken their positions through decades of dedication, innovation and investment and now form a single source contact for high tech military tools they are renowned for. They are eminent experts in their fields now unified for a single purpose, to provide your modern soldiers and law enforcement officers with the vital and specific needs required to complete the tasks assigned to them.

**BDT**

BERETTA DEFENSE TECHNOLOGIES

BDT is an alliance of four market leading companies, masters of excellence and new world thinkers owned by Beretta Holding, who have focused their combined technical prowess and now form a single source contact, supplying the operational needs of Military & Law Enforcement personnel worldwide.

All four companies are owned by Beretta Holding giving you security, stability and a global player with centuries of experience. In addition to their individual specialism, each have their own subsidiary networks and close ties with allied product makers who have in depth knowledge as to how they augment their ranges. Each bringing their own expertise but with a unified focus to provide the best possible solution for any given situational demand.

BERETTA

Founded in 1526 and based in Gardone Valtrompia, Italy. Time proven and operationally tested, the centuries have passed and simply underlined Beretta as one of the premium names in the defense and Law Enforcement sectors. Producing the widest range of small firearms in the world from the most state-of-the-art facilities in the industry, the oldest firearms factory (officially documented since 1526), and one of the most successful has been passed down through 15 generations of the Beretta family and now exports over 75% of the weapons produced to over 100 countries.

SAKO

Sako Ltd. is located in Riihimäki, Finland . As a world renowned sniper rifle and ammunition maker, Sako is globally recognized as one of the pioneers of sniper rifles and high quality ammunition. Sako produces some of the finest sniper rifles in the world, both for the Military and Law Enforcement agencies. The accuracy and precision of their rifles have given them an enviable reputation with special forces around the world. Sako range of specialized ammunition give consistent performance when taking on targets at medium and long range.

BENELLI

Founded in 1967 and based in Urbino, Italy, Benelli is a world renowned producer of tactical semi-automatics, rifles and pump action shotguns. A highly reputable manufacturer and market leader of tactical shotguns, producing the fastest acting semi-automatic shotgun in the world. Benelli has been making shotguns since inventing a new operating system for smooth barrel semiautomatics, which is regarded as a milestone in the world of shotgun development due to the revolutionary inertial operating system and its safe and reliable mechanical performance.

STEINER

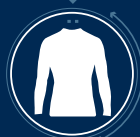

A German company based in Bayreuth and established in 1947, Steiner is one of the most advanced manufacturers of military binoculars and rifle scopes in the world. A specialist in the field of Optronics, supplying official issue binoculars and rifle scopes for many armed forces and Law Enforcement agencies worldwide including special forces, naval and artillery units. Steiner is a pioneer industry, leader in the use of laser protection filters for binoculars, distinguished by the incorporation of innovating design and high technology in their ranges.

FIREARMS

Pistols, Tactical shotguns, Sub machine guns,
Grenade launchers, Assault rifles,
Carbines, Sniper rifles

**CLOTHING & ACCESSORIES**

Multi layer clothing system, Outer layers for
protection and concealment, Technical footwear,
Carrying equipment, Firearms' accessories, Cleaning kits

**OPTRONICS**

Binoculars, Rifle scopes, Night vision aids,
Aiming systems, Laser sights, Visible and IR Laser,
Flashlights, Mounts and accessories

**RIFLE AMMUNITION**

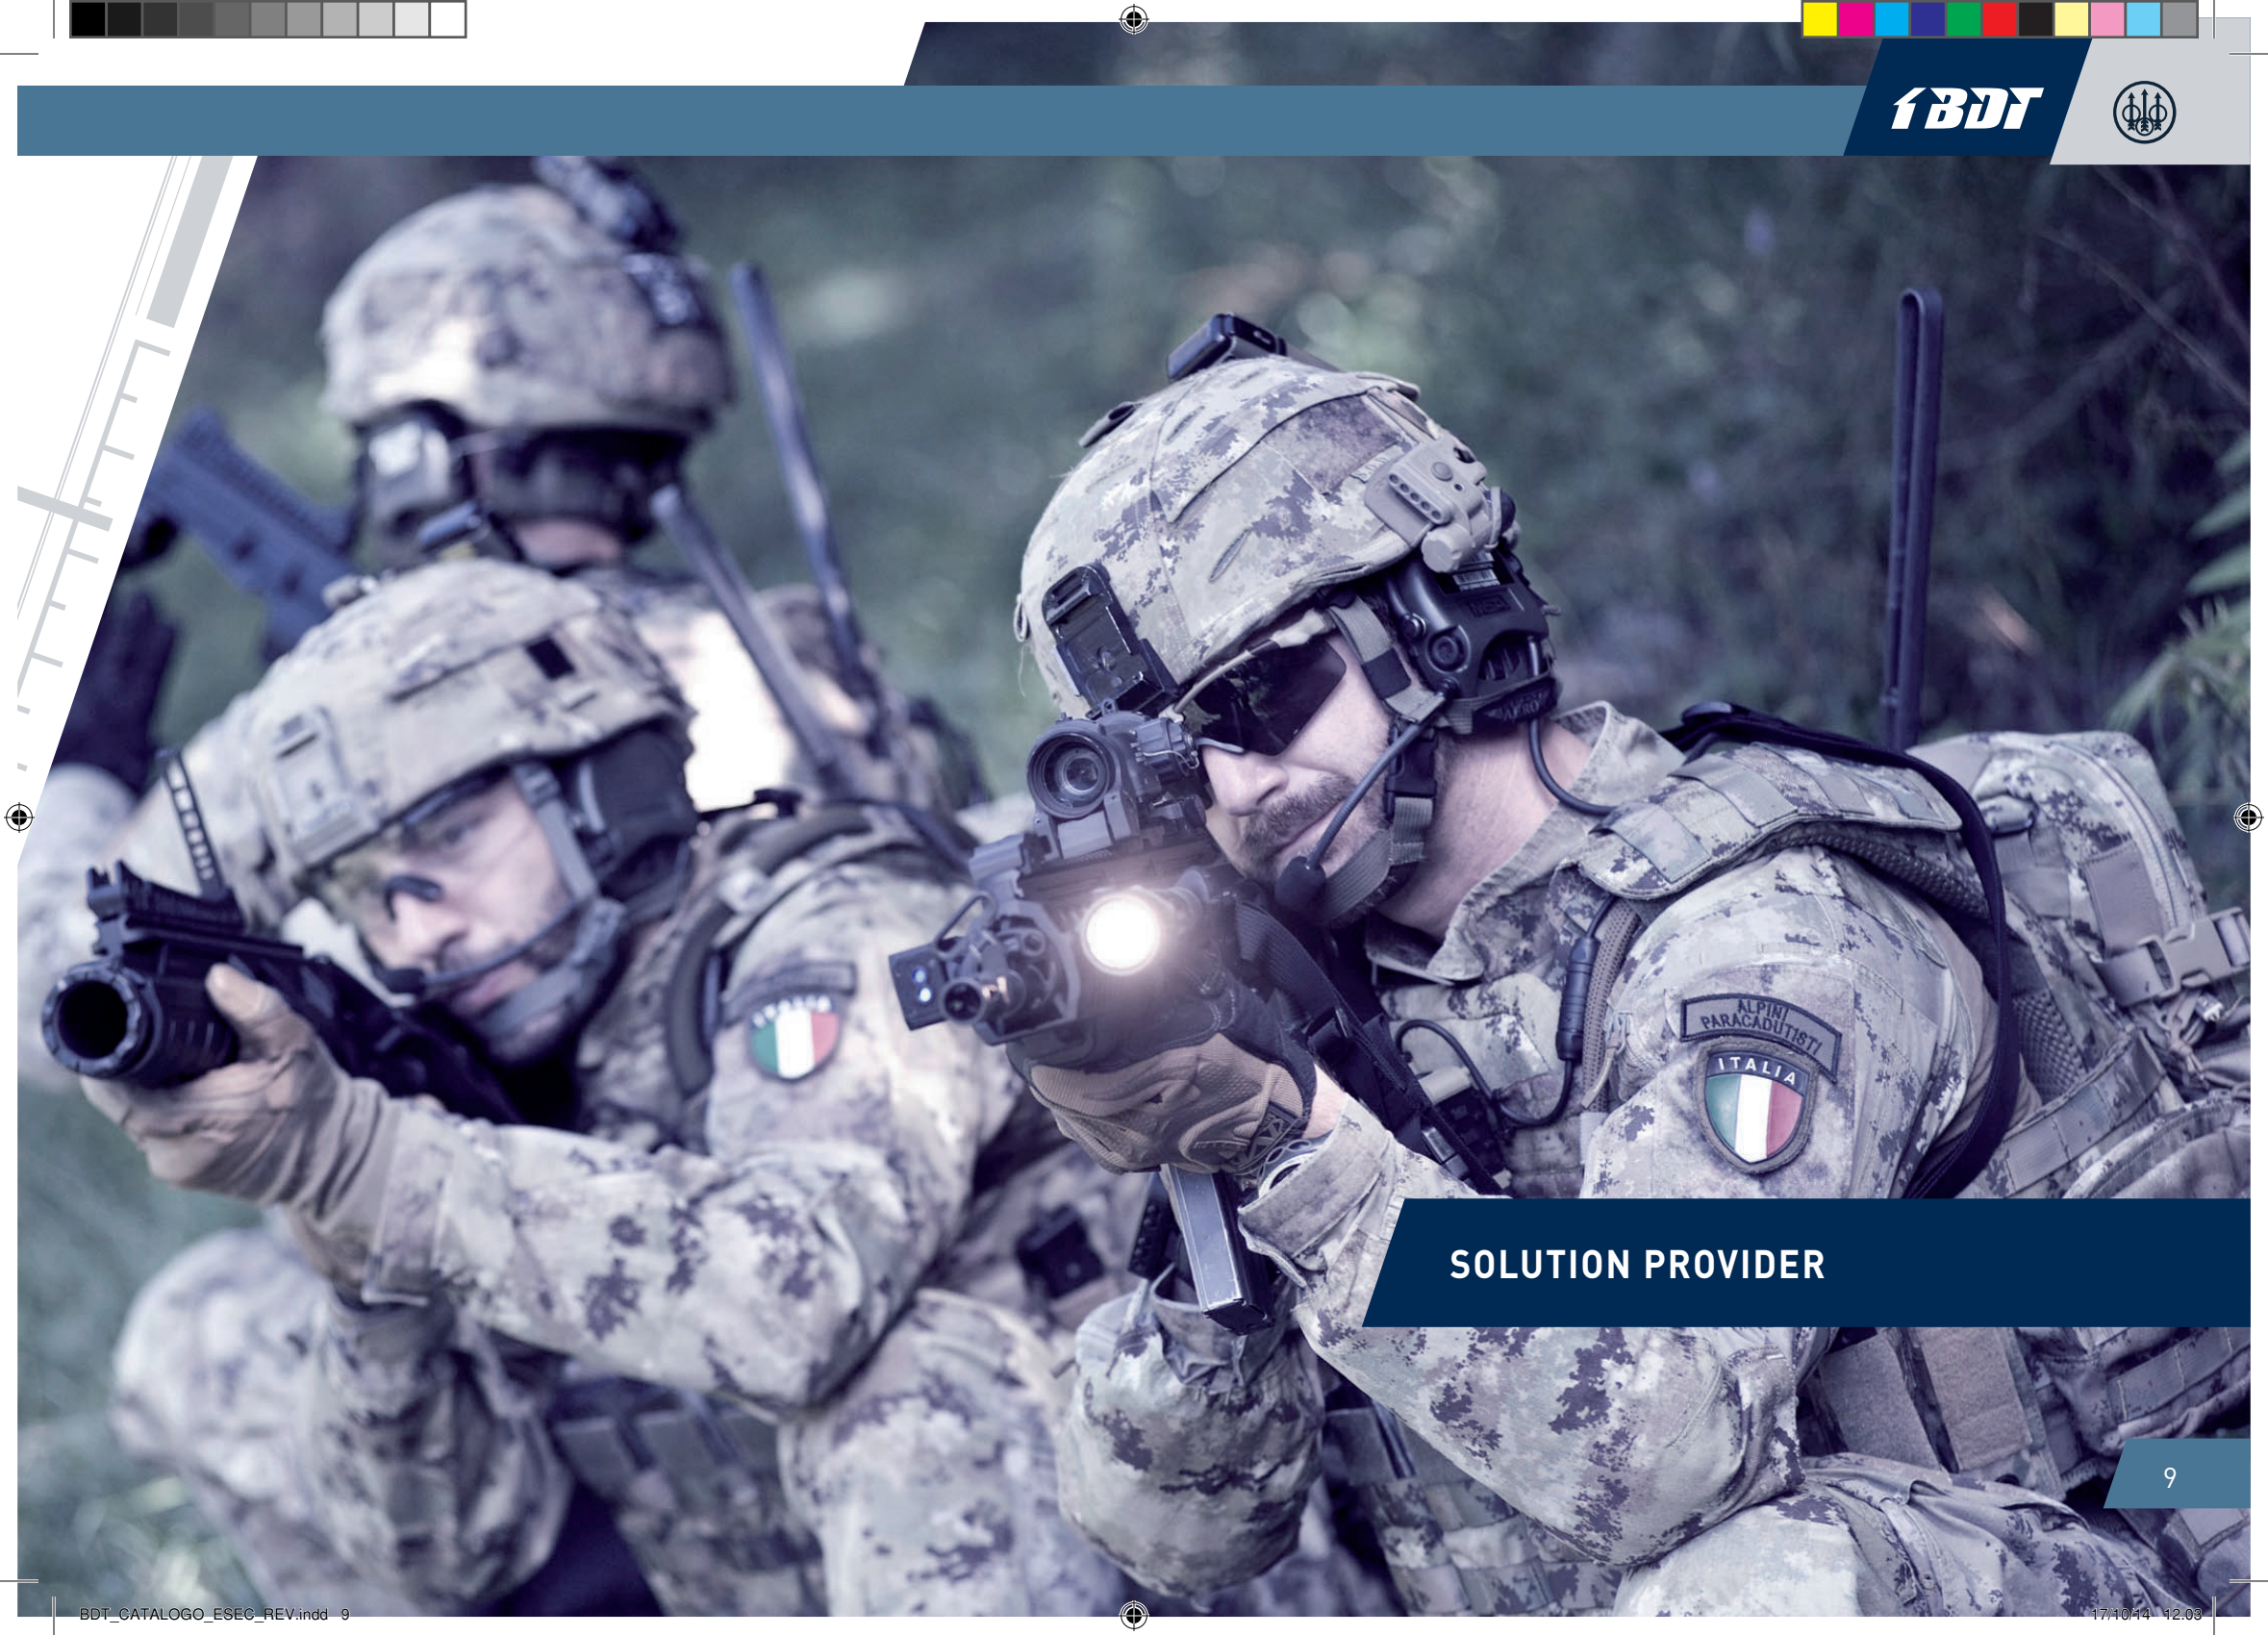

Ammunition to create a complete rifle system. The range
of specialized ammunition is guaranteed to give consistent
performance when taking on targets at medium and long range

**ENHANCING PRODUCT PERFORMANCE**

Beretta Defense Technology is a concept that has grown from the needs of governments and agencies to cover a wide range of complicated scenarios, by providing with the unique combination of services, weaponry and equipment – from firearms, ammunition, optronics to tactical clothing.

The exclusive market approach of BDT guarantees to offer more than the mere physical product. It will offer the opportunity to enhance the performance of each product provided, through the use of technologies, devices and solutions by custom tailor the products in order to match every operational needs.

Beretta's experts lead the way for new product development which they achieve by constantly monitoring the key factors that impact on them, increasing in the process not only their personal expertise, but also creating the synergy required for a long term commitment to new products development.

SYSTEM APPROACH

COMFORT, PERFORMANCE, PROTECTION AND DURABILITY
TO IMPROVE OPERATIONAL EFFECTIVENESS

+ : INCREASE

- : REDUCE

BERETTA CLOTHING SYSTEM

Beretta Clothing System. According to BDT, "system" indicates a philosophy aiming to optimize the resources, in order that an armed force is able to acquire high quality clothing, saving money in other sectors. The evolution from the conscript to the professional system, and the frequent operation in theatres with different risk levels, made the military clothing a fundamental part of the soldier's equipment of today. The product must be resistant, and must last in the time. BDT proposes not only the development of the clothing, but also a logistic system, in order to optimize the use of the resources.

**BDT**

Modern soldiers & Law Enforcement officers face an environment that requires precision and force, tact but persuasion, to engage yet remain out of harms' reach. The efficient implementation of these tactics is controlled by personnel knowing their capabilities and having the confidence in the tools available to complete the task. Tools and capabilities, ranging from firearms to specialist apparel and equipment, that are evaluated and constructed for effectiveness by the experts of Beretta Defence Technologies after listening closely to management goals and requirements.

+ **+** **+** ▶ : OPERATIONAL EFFECTIVENESS

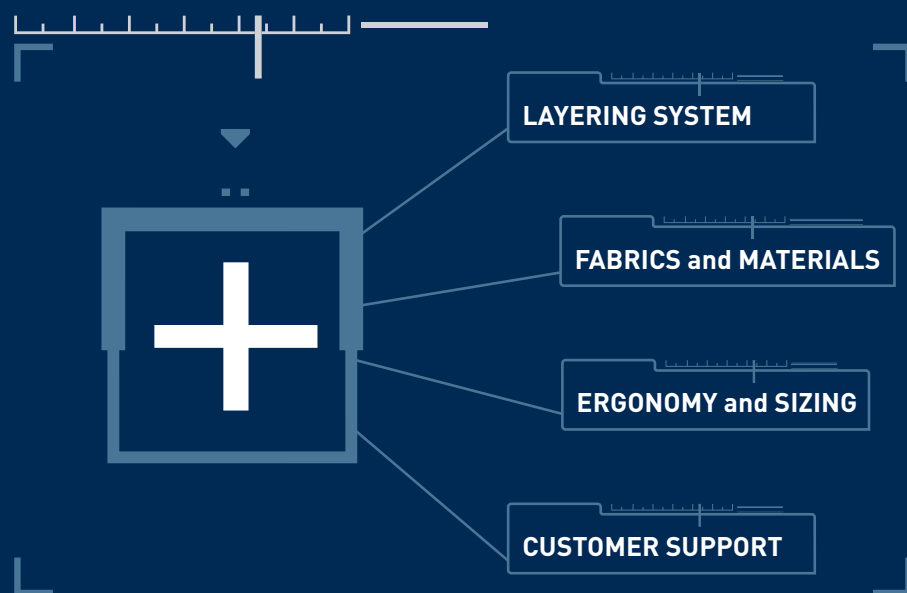

A dark green long-sleeved shirt with camouflage sleeves and a vertical ribbed stripe down the center.

A black long-sleeved athletic shirt with a crew neck. The shirt features a small white tag on the left sleeve. The fabric appears to be a smooth, possibly synthetic material, typical of athletic wear. The shirt is displayed against a plain white background.

A full-body view of a camouflage jacket. The jacket features a white stand-up collar and a black patch on the upper left chest. The camouflage pattern consists of green, brown, and tan splotches. The jacket has a full-length zipper and visible pockets on the sleeves and chest.

**BDT**

COMBAT AND SPECIAL LINES

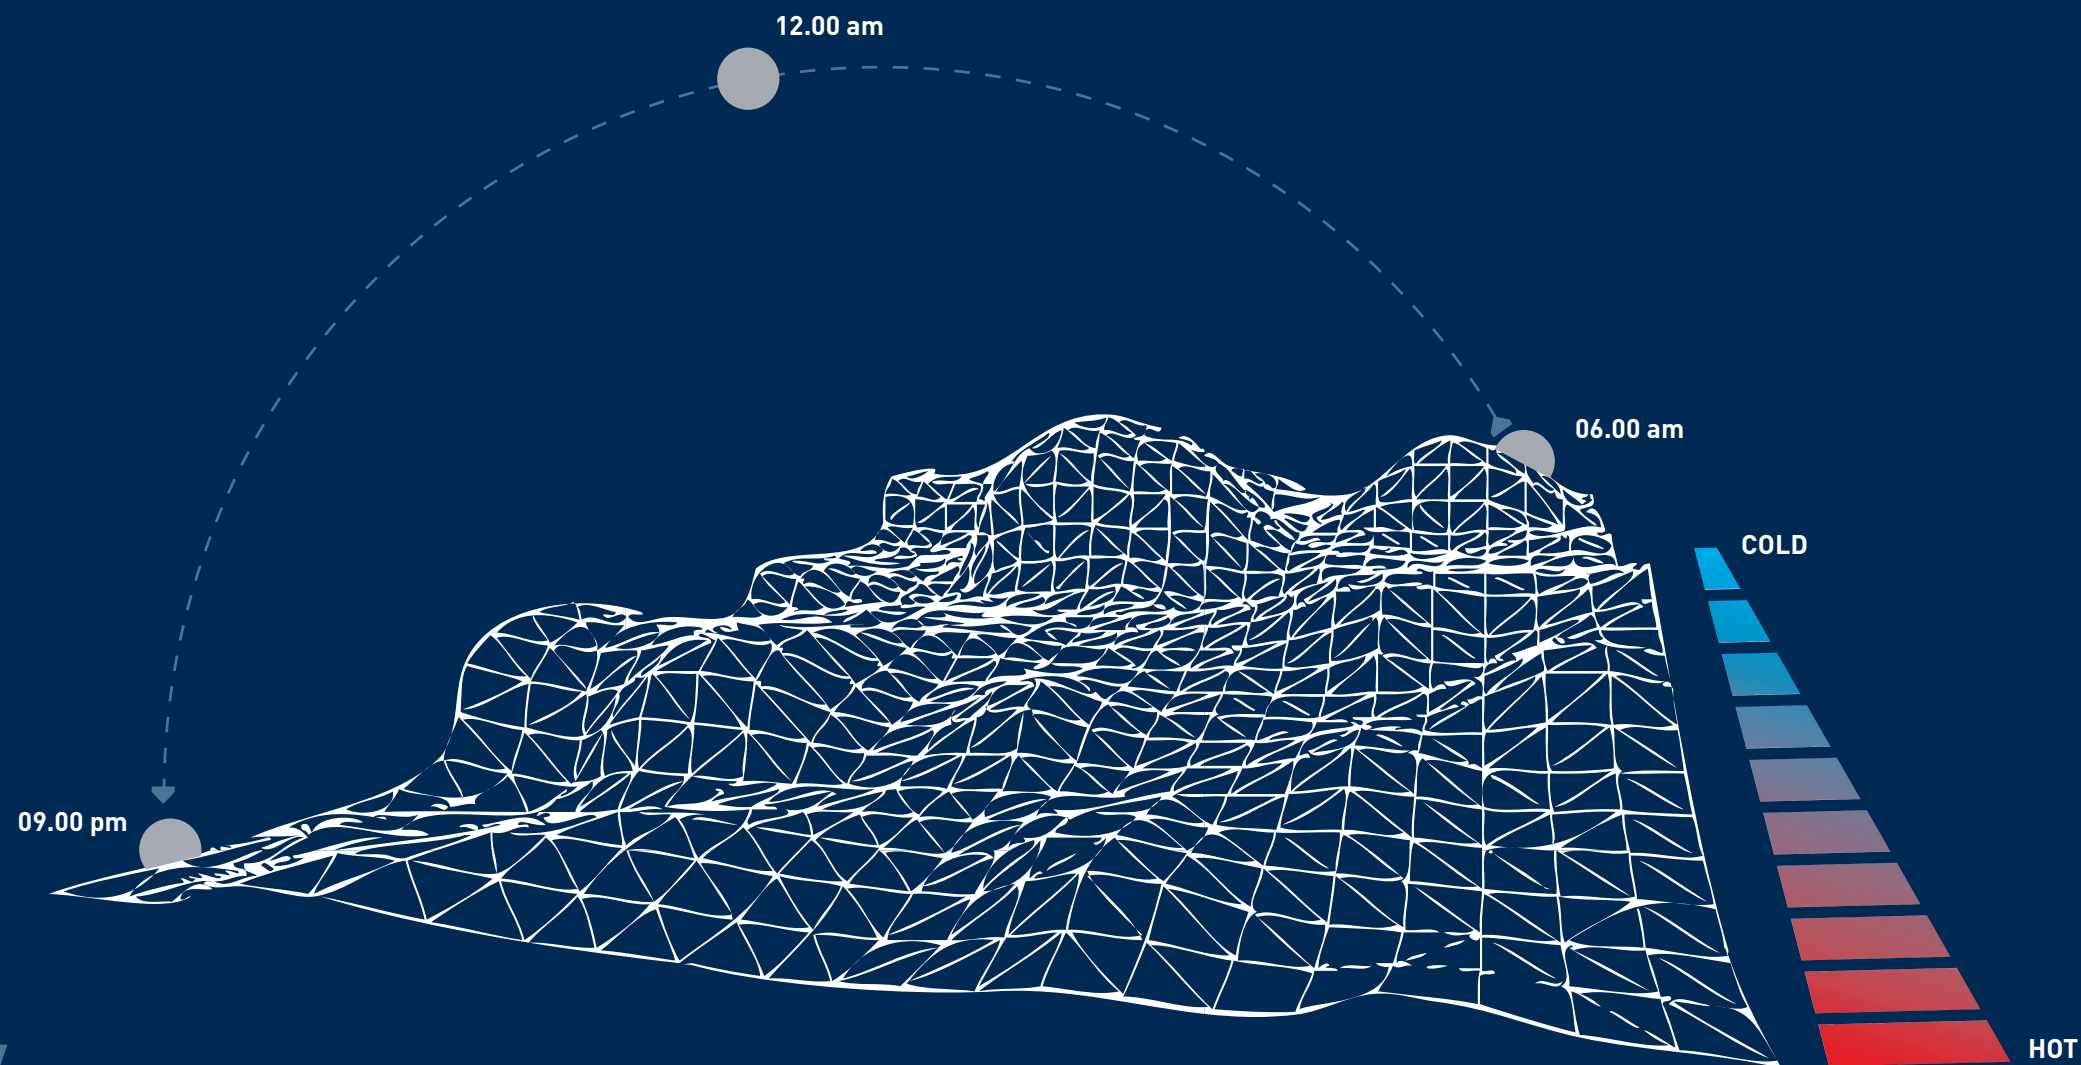

All tactical equipment and apparel guaranteed by Beretta Defense Technologies are subject to thorough testing to ensure that they perform well under adverse conditions, and involve the cooperation of specialist companies with specific experience in their relevant category to ensure the validity of testing. Tactical clothing undergo the following tests:

- Traction test: ISO 1421
- Tearing test: ISO 4674 A1
- Fire test: ISO 15025
- Water repellence test: ISO 4920
- Absorption capacity test (Bundesman test) ISO 9865
- Dimensional variations after washing ISO 5077-ISO 6330
- Permeability to air ISO 9237
- Colour consistency (light resistance) ISO 105
- Pyroman test (fire or temperature increase)

Simulated storm conditions and performance under conditions of prolonged rain with horizontal and vertical gusts of wind.

DRIVERS

ERGONOMY, MATERIALS,
AND USERS FEEDBACK

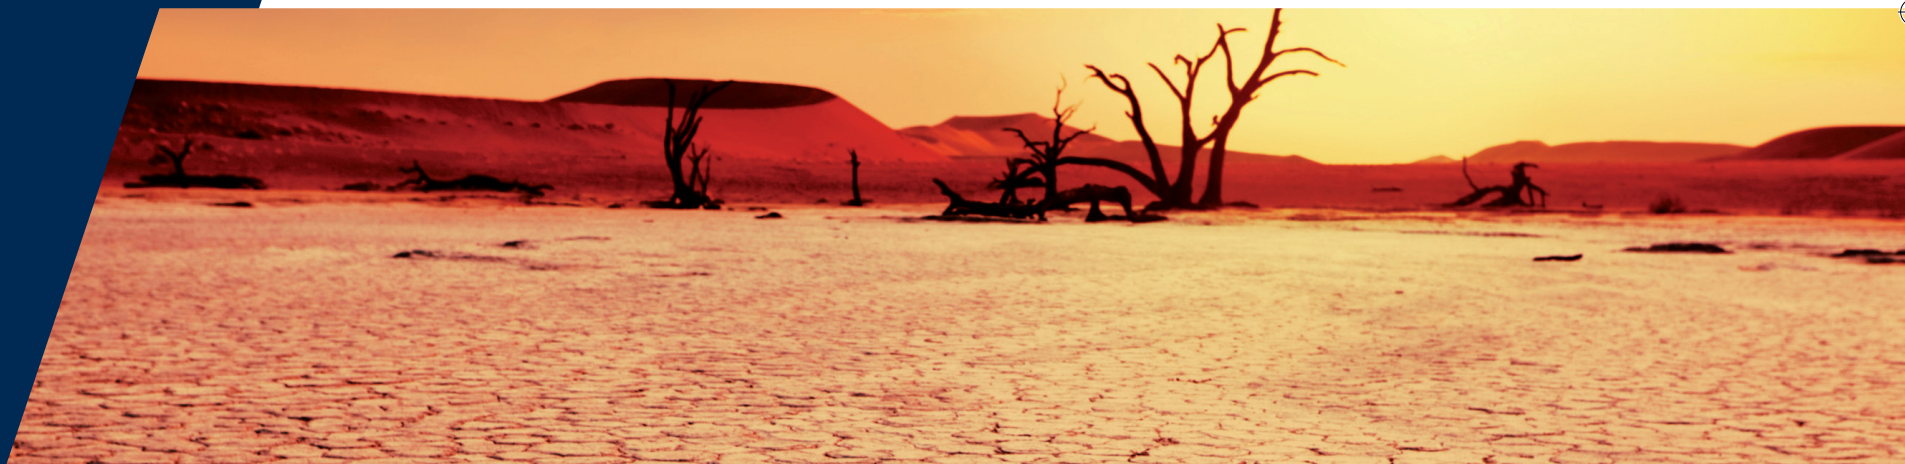

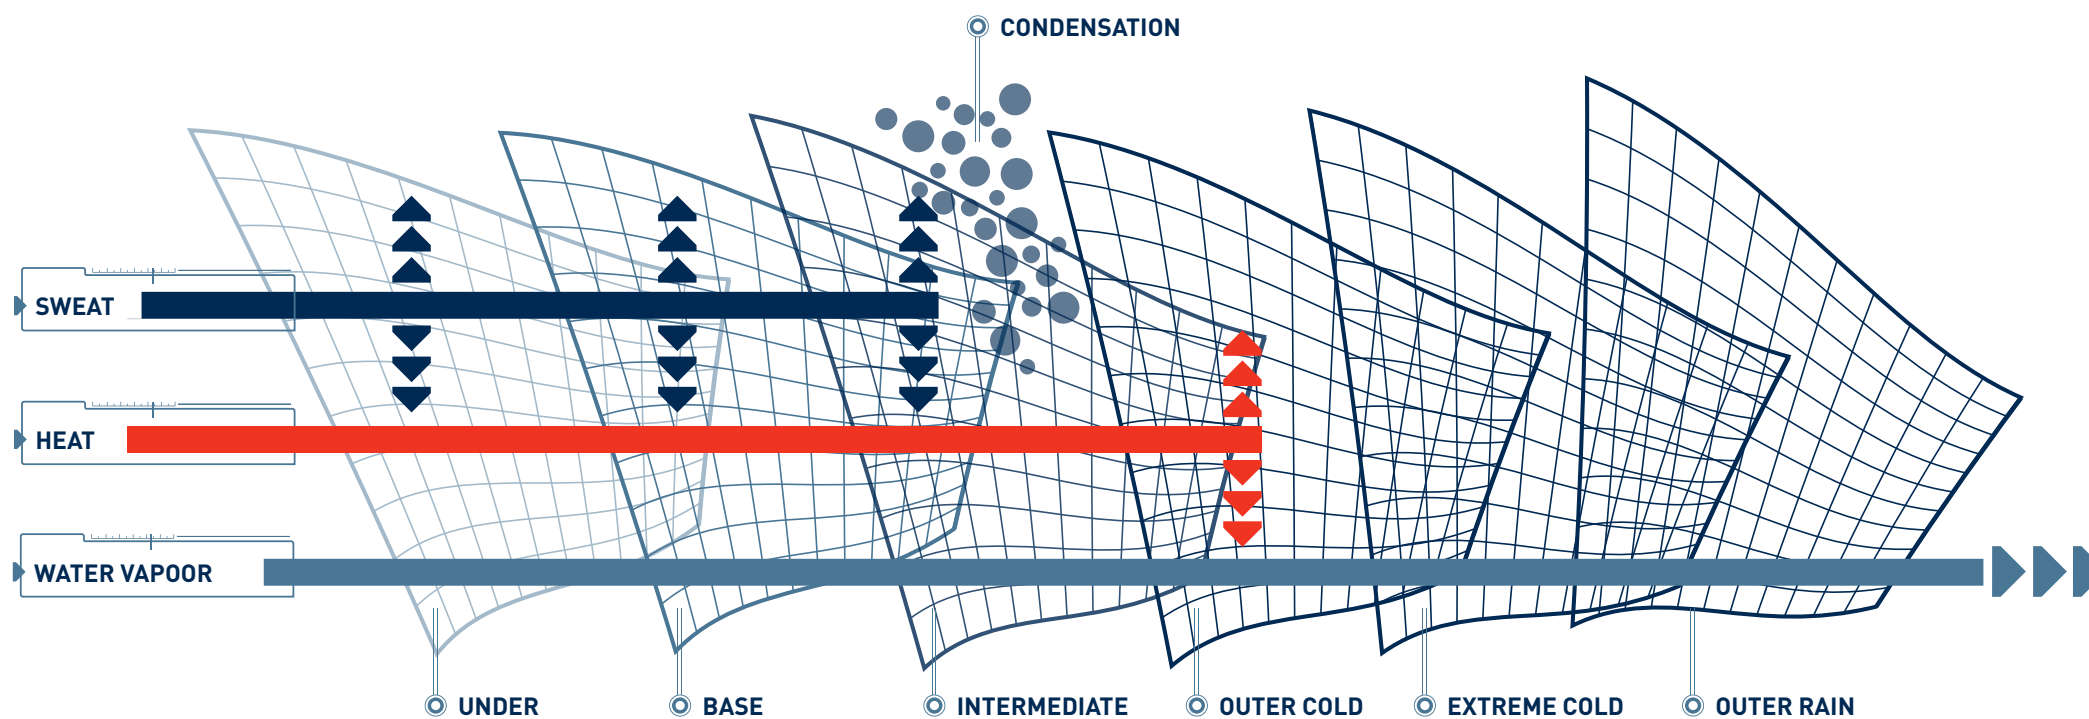

IBDT

Modern warfare requires soldiers to operate in any climatic and weather condition, during day and night. Environment threats and combat danger make mobility and protection a high priority for any man and woman wearing a uniform. Whether soldiers are assigned to combat or not, operational effectiveness relies on psycho-physical comfort as it does on strenght.

The product lines are four: Combat, Tactical, Utility and Special. The first three are based on the concept of layers, called Under, Base, Midweight, Intermediate, Outer Rain, Outer Cold, and Outer Extreme Weather. The Under component are three: boxer, T-Shirt and socks, in summer and winter versions. All the clothings are made with seamless machines. The texture of the t-shirt includes threads in silver and carbon fibre, destined to anti-bacteric and anti-static functions. Special attention has been devoted to the transpirability of the underwear, for comfort, and safety.

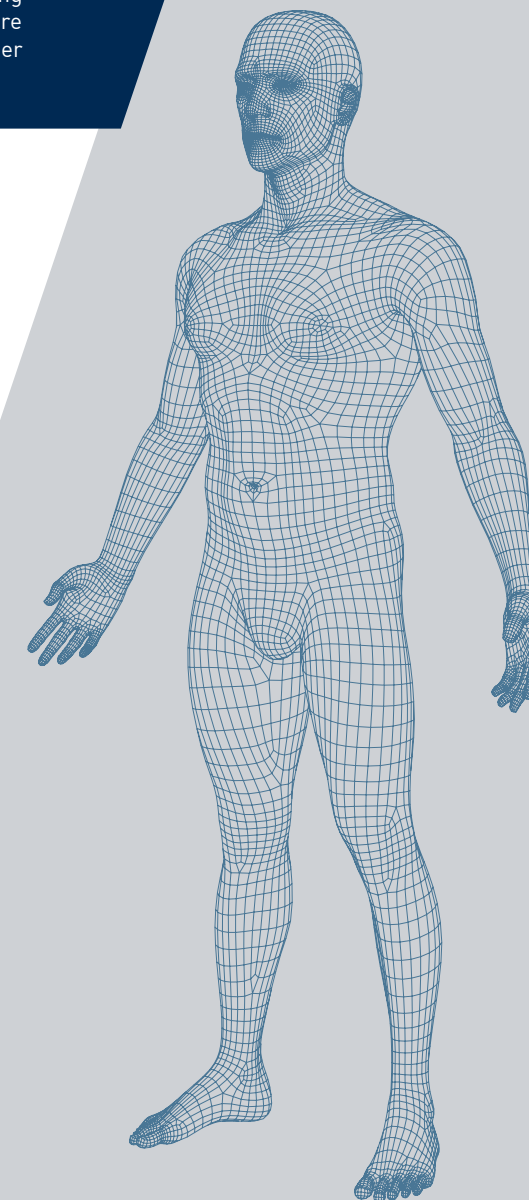

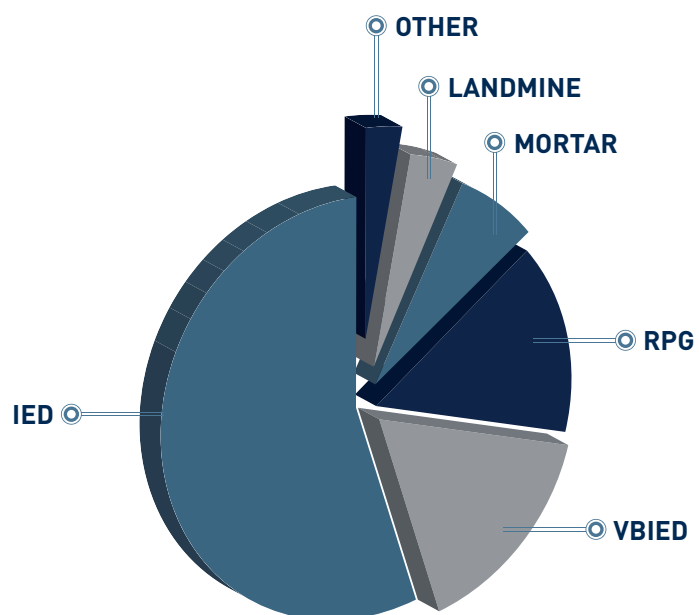

Finally, the Outer Extreme Weather is derived from the sportswear hunting clothing, and it will be soon available in camouflage thread. The Combat and Tactical clothings have also flame retardant and flame resistant features, according to the needs. According to the data, the Pyrad thread used for these clothing is five times more resistant than the normal combat suits now in service. The Utility clothing line does not have some features, such as the low IR reflection.

**IBDT**

The socks are made with different materials, depending on the zone of the foot. The Base layer is formed by a jersey with long sleeves, tights, and gloves. The Intermediate layer is formed by the combat suit, in two parts. The Outer Rain layer is made in Gore thread under the principle "Performance Zone", and is divided in specific areas. The same concept have been used for the Outer Cold layer, which includes under jackets with and without sleeves, in Primaloft, and thermic gloves

COMBAT KIT

Summer socks (100g.)

CL23 296

Light socks with a modulated structure and strengthening in the areas where most wear takes place. The silver fiber woven into the fabric has the following important characteristics:

1. Anti-bacterial and anti-odor: fights the bacteria which cause odors and eliminates fungi; neutralizes the ammonia and denatured proteins (present in sweat), stopping the spread of the bacteria.
2. Thermodynamic action thanks to the thermal conductivity and reflecting and radiating properties of the silver.
3. Moves moisture outwards ensuring an ideal temperature in any conditions.
4. Therapeutic action: thanks to its conductive properties, it stimulates circulation generating health benefits.
5. 100% natural: this fiber is safe and non-toxic and does not contain chemical residues.

**BDT**

Rubber sole made of anti-slip and anti-abrasion compounds. Upper cuff has ULTRA LOCK system patented by Dynafit which allows one to change from walking to downhill skiing simply and quickly. Racks with 4 positions and micro-metric adjustment. Upper cuff can be rotated 60° which facilitates walking skiing and the spoiler insert allows to block the boot at 2 angles when downhill skiing: 15°/ 18°. Internal liner is made of insulating material and is available with laces; the upper is in polyamide with a 5mm polyethylene foam support. The boot is padded with EVA and the internal lining is in velvet. It is possible to use external supports for walking and moving with the liner without inserting it in the plastic shell. Thermoforming ability
Velcro strap for closing the top of the boot
Weighs 1.450g. (size 27.5)
Available sizes from 25 to 31,5 (including half sizes)

Seal skin

SpeedSkin Dynafit. Pomoca skin, 70% Mohair, 30% synthetic. Excellent combination of glide and grip. The only skin in the world with a membrane and excellent resistance to water, as well as an adhesive plastic layer, without the use of cotton. Pro Glide treatment is applied to increase its waterproof nature and avoid forming snow clogs. Patented Klick attachment system for quick attachment that is compatible with Dynafit skis. Attachment is at the tip and tail.
