

2015 PRODUCT GUIDE

BERETTA
500 YEARS. ONE PASSION.

THE WORLD OF BERETTA

A world of passion and authenticity. Beretta was born in 1526, during the height of the Italian Renaissance. Our oldest surviving company document shows how the Republic of Venice trusted us to build gun-barrels for the defense of that magnificent city. We were making history then, and have been making history for the last half-millennium by serving our customers with enthusiasm, integrity, and by being innovative without losing sight of our Italian heritage.

Since its inception, our company has been owned and operated by the Beretta family with a continuity that makes us unique in history. As you turn the pages, you will experience the flavors and textures of our tradition - a tradition that we are proud to share with you.

The Beretta M9 Celebrating Thirty Years At Their Side

THE BERETTA M9: RELIABLE, ACCURATE, PROVEN.

Since 1985 Beretta has walked the walk with our troops. From the deserts of Iraq to the mountains of Afghanistan, from the jungles of Panama to the forests of Bosnia – in more than 36 countries the Beretta M9 has served the U.S. Military, helping them protect freedom around the world.

Beretta is proud to be by their side now and into the future. We continuously improve our M9 by listening carefully to those who serve and who use our pistol in the line of duty. From the M9A1 for the U.S. Marine Corps, to the 92A1/96A1 sold to military and law enforcement agencies worldwide, we are committed to providing them state-of-the-art weapons.

Visit the “Faces of M9” section of our website to see how the M9 has impacted the lives of men and women in the U.S. Military.

Visit M9.Beretta.com

Beretta developed its first semi-automatic pistol over 100 years ago—and that pistol was almost immediately adopted for official military use. Since then, Beretta has been crowned with prestigious military and law-enforcement contracts practically all over the world. Why? Because we not only answer the challenges of combat professionals. We anticipate and solve them before they even emerge.

EXPERIENCE: No other company has 500 years of experience, feedback from the field and manufacturing expertise.

RELIABILITY: A Beretta is designed with one thing in mind: never letting its owner down. Therefore, we never rest until we offer products that can withstand the hardest use in the most impossible conditions.

VERSATILITY: From concealed carry to self-defense, from police to military use, from recreational shooting to varminting, there is a Beretta tactical product that offers best-in-class performance, design and customization possibilities.

M9

BATTLE-TESTED
RELIABLE, ACCURATE, PROVEN.

Proudly made in the U.S.A.

90SERIES

Tactical

OFFICIAL SIDEARM OF THE U.S. MILITARY.

Distinctive military style markings on various components closely replicate those of the U.S. Armed Forces M9 pistols.

Unique M9-prefixed serial number (M9-xxxxxx) sets this configuration apart from the other 92 series pistols.

M9

From the jungle heat of Panama to the savage sandstorms of Iraq, U. S. Armed Forces have counted on the M9 as their official sidearm for over a quarter century. The commercial M9 pistol is the closest thing to the military M9 that a civilian may legally own. Functionally, this M9 is identical, in every regard, to the military M9. The combat trigger guard, finish, sights and operating system that every U.S. soldier, sailor, airman, and marine rely upon in battle. Like its military counterpart, the commercial M9 not only meets or exceeds all U.S. Military testing guidelines, it totally rewrites them. The commercial M9 delivers the same accuracy, reliability, and performance that defends our nation's defenders. With such a pedigree, there can be no question that the M9 will satisfy the most stringent demands for practically any use.

90 SERIES

M9A1

The United States Marine Corps came to Beretta and asked for a modification to their M9 pistols. They wanted an accessory rail to attach tactical lighting devices and laser aiming devices as they head into the darkest corners of the world. In 2006, the M9A1 was born. The M9A1 sports aggressive checkering on the frontstrap and backstrap, a mil-spec picatinny rail, and specially designed, PVD coated, sand resistant magazines.

90 SERIES

92 COMPACT RAIL

Designated M9 by the U.S. armed forces and known simply as the 92 around the globe, the NATO-certified Beretta 92FS is one of the most iconic military pistols in the world. With outstanding accuracy and reliability, the time-tested and battle-hardy 92FS is simply The World Defender. The new 92 Compact Rail takes some of the best features of the 92/M9 family and scales them down to be more compact and concealable. And with its integral Picatinny rail and custom-style checkering, the 92 Compact Rail adds an extra premium touch to the legendary performance of the 92—making it perfect for off-duty carry, plainclothes work or everyday concealment.

90 SERIES

92FS

If there is a pistol that needs no introduction, you are looking at it. After a quarter-century of service with the U.S. armed forces, a recently renewed contract and continued use by allied militaries worldwide, the 92FS is one legendary piece of gear. But how did it gain and maintain this enthusiastic professional following? Simple: it never stops delivering—that is, delivering outstanding accuracy and reliability in the most demanding conditions. Its open slide design and optimal chamber feed and angle allow for ultra-reliable feeding of commercial ammunition, even with today's more pronounced hollow-point designs. And it keeps passing the military's stringent 10-shot, 3" or less test at 50 yards, making it shoot much better than any task for which it may be employed. If you want to own a highly functional piece of history—and one that will never let you down for home defense, carry, competition or recreational shooting—it is time to upgrade to the 92FS.

Description	Product Code	UPC Code	Caliber	Action	Overall Length	Overall Height	Barrel Length	Sight Radius	Overall Width	Grip Width	Weight Un-loaded	Magazine Capacity

90 SERIES

92AI & 96AI

The latest addition to the 90 Series Family, the 92AI/96AI is the ultimate evolution of the 92FS. The frame of the AI's have an integral MIL-STD 1913 rail for attachment of tactical lights and laser aiming devices. 9mm magazines have an increased capacity of 17 rounds and are completely interchangeable with other 9mm, 90 Series pistols. The new, removable front sight allows the user to easily replace damaged sights or to install tritium night sights or other accessory sights. The new captive, single-piece recoil spring assembly simplifies the assembly and disassembly process and minimizes the possibility of spring loss. The AI's also feature a new, internal frame buffer that increases service life by reducing stress on the receiver. The 96AI brings a .40 caliber 90 Series pistol back for those shooters who demand the extra punch.

PX4 FULL SIZE

TYPE F

The PX4 double/single action represents the culmination of a century building, testing and refining pistols for military and law-enforcement use. This NATO certified pistol is currently in use by military and police groups around the world in every environment imaginable. Designed to meet the most stringent military standards, the PX4 has been reported to fire well over 150,000 rounds with zero part breakage. The steel and polymers used to create it were developed to exceed the most impossible standards. And with its rotary-barrel design, the PX4 dissipates recoil away from the hand and greatly reduces muzzle jump—making it accurate, pleasant to shoot and lightning-quick on target.

Px4 INOX

Utilizing all of the features and strengths of the NATO certified, battle hardened Px4, the Px4 Innox brings a new style and look to the Px4 family. Machined from bar stock, the Px4 Innox's stainless steel slide is bead blasted to a soft, satin finish to ensure a non-reflective surface. Paired with the highly refined techno-polymer reinforced fiberglass frame, the Px4 Innox is ready for hard use in any environment. Like all Px4's in the family, the Px4 Innox has three interchangeable backstraps, a magazine release that can be easily changed for right- or left-handed use, and an in-line feeding system that offers unparalleled reliability in the worst conditions imaginable.

- Lubricant oil

PX4 SD

When the US SOCOM sent out a request for a new pistol, Beretta answered the call with distinction. Not just a spray painted version of a production pistol, the Px4 SD was built from the ground up to exceed the demanding requirements of SOCOM. Only the slide and frame were used from the original Px4 .45 to create the Px4 SD. Virtually every internal component was specifically designed, produced, and specially treated to create a pistol that is unrivaled in performance in the most impossible conditions imaginable. Many claim they can pass the venerable "Over the Beach Test," but Beretta has proven it in military trials. Sand, salt, mud and just about anything else you can throw at the Px4 SD are merely shrugged off. When the impossible is expected, the Px4 SD is, without question, the companion to have at hand.

Px4 Storm

Rotary locking system allows radial dissipation of recoil energy effectively reducing muzzle flip and felt recoil

Px4 .45

The Px4 .45 is the result of a platform created to develop the ultimate .45 to meet the strict specifications of SOCOM's Joint Combat Pistol request. Utilizing a cold-hammer forged barrel for precision and a slide machined from bar stock made of Beretta's proprietary steel blend, the Px4 .45 represents the ultimate marriage of strength, power and performance. The 9 and 10 round magazines were specifically developed to operate despite sand, fouling and the elements. Beretta's battle proven Bruniton™ finish will ensure the Px4 .45 stays protected, regardless of the environment. If you need to play in the sand, crawl through mud, or go for a 3-mile swim, the Px4 .45 is ready.

PX4 COMPACT

With the introduction of the Px4 Compact pistol, Beretta has completed the Px4 Family. Heralded by many as the ultimate in balance and proportion, the Compact is equally suited for concealed carry, in a duty holster, plainclothes operations, home defense or a day at the range. Though it is completely concealable, the Compact offers a full grip for most shooters. The Compact offers full 16 round capacity (15+1 in 9mm), an accessory rail, ambidextrous slide stop, new integral and retractable lanyard loop, and a cold hammer forged barrel for ultimate precision. The Compact also houses the Px4 family's rotary barrel system. This system allows for in-line feeding for unparalleled reliability. The rotary barrel system leads to radial dissipation of recoil energy resulting in a significant reduction in felt recoil and fast follow-up shots.

Px4 Sub-Compact comes with three interchangeable backstraps designed to customize the pistol for the shooter

SnapGrip® extension ensures maximum grip area for larger hands

PX4 SUB-COMPACT

The Px4 Sub-Compact is a lot of pistol in a little package. It delivers all of the modularity of its bigger brothers in a sub-compact frame. Shooters still have the ability to change out three different backstraps, mount lights and lasers on the accessory rail, switch the magazine catch from left to right, and carry up to 14 rounds (13+1 in 9mm). The Sub-Compact's Snap-Grip allows users with larger hands to snap the extension of the magazine base downwards to gain a full grip when shooting. When ready for reholstering, this extension can be snapped back in a flush position, making the pistol regain its small size for concealed carry. When you don't want to lose big gun performance, but need to carry concealed, the Px4 Sub-Compact will exceed your expectations.

BU9 NANO

Tiny, absolutely snag-free, powerful and ultra-reliable: the Nano was designed to become the standard for full-power sub-compacts, and it has hit the mark in spades. Pass your hand around its lines, and you will feel that the Nano lives and breathes concealed carry. Hold it and you will see how the natural pointability and ambidextrous controls make it a snap to operate under the most demanding conditions. Shoot it, and you will enjoy how its minimal barrel tilt feeds hollow-points like a dream and reduces muzzle jump. Take it apart, and you will know that its modular design based on a serialized chassis make it super-easy to maintain and fun to customize with different interchangeable grip-frames (including with laser sights). And with its user-adjustable sights, corrosion-resistant parts and a plethora of available accessories, the Nano will satisfy even the most demanding needs for concealed carry and personal defense.

PICO

Super thin, ultra concealable, easy to accessorize, the Beretta Pico double action semi-auto sets a radical new standard for the micro compact carry pistol. It is the thinnest .380 made today, edging out the nearest competitor by a full millimeter. This, plus its protrusion- and snag-free frame make it considerably less likely to "print" and therefore absolutely perfect for pocket carry. But at only 11.5 oz. unloaded, the Pico is also ideal for any other form of concealed carry—from deep tactical concealment to carry in a purse or belt-holster. Its core is a serialized chassis, meaning that its grip frame can be easily swapped with a selection of other frames, including those with a built-in laser accessory. And with its adjustable sights, ambidextrous controls and easy disassembly, the Pico leads the way as an undisputed leader in the sub-compact class.

21A BOBCAT & 3032 TOMCAT

Just like our 90 Series, our small-frame pistols are the stuff of legend. The 21A Bobcat and the 3032 Tomcat have a pedigree that goes back to a pistol carried by everyone's favorite fictional gentleman secret agent. With their tip-up barrel design that provides easy access to the chamber and no need for slide retraction, these diminutive pistols are a snap to use. And with their classic lines, they are a joy to carry and to elegantly conceal (even under a perfectly-tailored tuxedo or evening dress!).

NEOS INOX

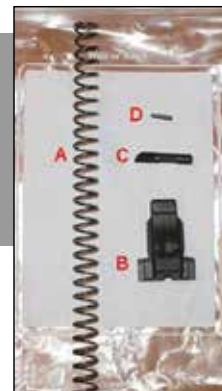

Designed and manufactured in the USA, the NEOS is a modular semi-automatic .22 rimfire pistol, ideal for small game hunting, target shooting or informal plinking. Although its design and operation are simple enough for a first-time gun-owner, the NEOS will deliver plenty to the most veteran shooters. Easy to disassemble without tools, the NEOS is offered in the classic Beretta blue finish or in stainless steel (Inox). The ergonomic grip features non-slip finish and has optional rubber inlay panels, and the modular construction allows for a huge variety of personalization options that adapt it to different shooting disciplines.

Beretta 92/96 Locking Block Kit (LE9201)

The perfect kit to keep your Model 92/96 in perfect working condition after years of faithful use! This kit includes the following components: Recoil Spring (A), Beretta 3rd Generation Locking Block (B), 3rd Generation Locking Block Plunger (C) and a Locking Block Pin (D). Items B and C must be used together. Fits the following model firearms: Beretta 92-92S-92F-92FS-96-Billennium-Vertec-Centurion. The 3rd Generation Locking Block Components are the latest improvements in Beretta's Model 92/96 locking system.

Model	Product Code	Description
Beretta Solid Steel Recoil Spring Guide & Recoil Spring "Gold Finish"	E00189	Replaces factory Recoil Rod and Spring. Fits all Beretta 90 series pistols. Steel Recoil Rod and Titanium Nitride coated recoil spring. Nitride coating reduces friction and fights corrosion. It does not fit the 92AI, 96AI, and the 90-Two.

Overize Steel Magazine Release Button (C86992)

Overize Magazine Release Button 92/96 Series SS (UD8A0203)

Replaces smaller factory Magazine Release. Does not include bushings and spring. Requires re-use of your bushings and spring.

Beretta 92 / 96 / 98 Elite II Hammer (UD5A0584)

The perfect part to give your Model 92/96/98 an aggressive look! This skeletonized hammer is Beretta factory original and not only looks cool but can improve cycle time because of the lighter weight.

ARX100

The ARX100 takes the concept of a modular rifle to truly futuristic levels. The cold hammer forged barrel can be removed and replaced with various lengths and calibers in a matter of seconds. Case ejection can be easily switched from right to left at a push of a button, while all other critical controls are ambidextrous. The ultra-light, technopolymer receiver delivers flawless performance with virtually no lubricant, and will easily feed under the most unforgiving conditions. And as a true "aircraft carrier" of Picatinny rails, the ARX100 offers endless possibilities for accessorization, making it perfect for today's most demanding tactical shooter.

CAT CODE	UPC CODE	MODEL	CALIBER	ACTION	ROUNDS
JXRI1B00	68619-6	ARX100	5.56 x 45	Semi-Auto	30

ARX100 Multi-Caliber

The multi-position folding stock allows the user to adapt the rifle for every firing scenario.

Ambidextrous case ejection selector allows the user to choose left or right spent casing ejection.

ARX160

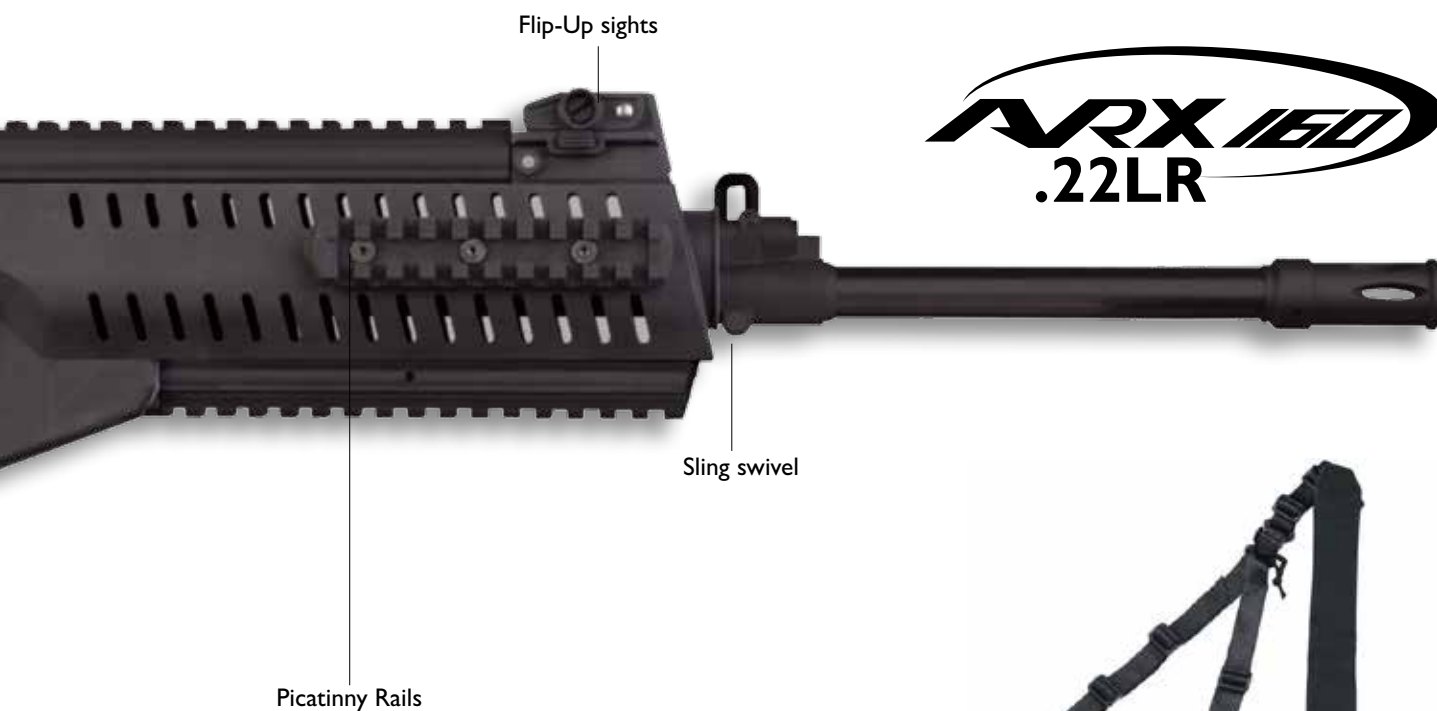

Finally, a training rifle in .22 rimfire that looks, feels and shoots like Beretta's heralded ARX160 military rifle. Mirroring its full-power cousin in virtually everything, this feature-packed rifle will never fail to turn heads at the range. Ambidextrous controls, folding stock, Picatinny rails galore—the possibilities for building up this rifle are limited only by the user's imagination. And with its tool-free disassembly and easy maintenance, the ARX160 is a snap to keep in top shape for a lifetime of enjoyable service.

BERETTA ARX160 .22 LR MAGAZINE

- 574600 - 5 ROUND MAGAZINE
- 574602 - 10 ROUND MAGAZINE
- 574604 - 20 ROUND MAGAZINE
- 574606 - 30 ROUND MAGAZINE

For non-stop action, make sure you have plenty of mags on hand for your practice session at the range. These spare, or replacement, magazines for the ARX160 .22 LR are available in 5, 10, 20, or 30 round capacity.

ARX160
.22LR

FEATURES

- ✓ Ambidextrous, two-position safety lever
- ✓ Easy access to the bolt and trigger system like .223 rifle
- ✓ Picatinny Rails following MIL STD 1913 in aluminium and polymer
- ✓ Ambidextrous magazine release
- ✓ Charging handle convertible from right to left when disassembled
- ✓ Telescopic and foldable stock
- ✓ Adjustable polymer Flip Up sights
- ✓ 8" barrel system-rifle variant
- ✓ 9" barrel system-pistol variant
- ✓ 20 rounds STANAG type magazine

ARX TACTICAL SLING

574106

This tactical sling is sturdy, reliable and adjustable so that it fits your needs perfectly. It allows for an easy carry solution while at the range.

ARX160 .22LR, END CAP

574104

Note: this item can only be used with the ARX160 .22lr PISTOL, and will not work on the Rifle platform.

ARX160 .22LR, VERTICAL GRIP

574102

Mount this lightweight vertical grip on your ARX160 .22 LR and you can hold the weapon while assuming a natural "fighting stance." Designed for mounting onto a standard Picatinny or Weaver rail system.

1301 TACTICAL

The 1301 Tactical is Beretta's new gas operated semi-automatic shotgun designed for law enforcement and home defense. Right out of the box, the 1301 Tactical features an oversized charging handle, large textured bolt release, and an oversized reversible safety button. The integrated BLINK gas operating system, featuring a cross tube gas piston, allows the 1301 tactical to cycle 36% faster than any other shotgun on the market. Available in an 18.5" barrel configuration, the 1301 Tactical features a robust, protected sighting system that uses a ghost ring for the rear sight and an interchangeable front blade sight. The receiver offers a MIL-STD 1913 picatinny rail. The Stock features an aggressive checkering pattern and length of pull is adjustable with the provided spacers. Drop and Cast can be adjusted as well.

1301 Comp

The 1301 Competition is Beretta's new semi-automatic shotgun for 3-gun and practical shooting competitions. Designed to be a winner out of the box, it features an oversized charging handle, large bolt release and extended reversible safety. We have supersized the loading and ejection ports to help competitors save precious seconds. The BLINK gas operating system cycles up to 36% faster than any other shotgun on the market. The barrel (21" or 24") use the Optima HP interchangeable chokes and features a stepped rib with mid bead and front fiberoptic sight, while the receiver is drilled and tapped for rails or other attachments. The stock is adjustable for length of pull (13"-14.5"), drop and cast, and features an aggressive checkering for a positive, winning feel.

At Beretta, we think of shotguns as works of art. They must not only be perfectly suited for their purpose in the field, but they must be authentic, beautiful and a joy to own. Therefore, Beretta shotguns continue to be the real thing for hunters who seek a thrill every time they open their gun-case, no matter if hunting season is still months away.

Just like any well-crafted work of art, Beretta shotguns are always innovative: our passion for seeking new things is equally strong in the field and the engineering lab. But at Beretta, innovation never comes at the expense of tradition. This is why our firearms retain a timeless appeal even while incorporating the latest technology.

We design our art to fit different hunters' tastes and budgets. Whether you seek a reliable semiautomatic shotgun to reach high-flying geese in the misty October marshes, or whether you prefer the classic feel of a hand-engraved over-and-under for upland quail, there is a Beretta shotgun that is right for you.

690 FIELD III

690 FIELD III

Since making the first barrels over 500 years ago, Beretta has defined tradition in firearms manufacturing and craftsmanship through use of the finest materials, attractive wood, and masterful engraving. With centuries of experience comes expertise handed down from one generation to next.

This tradition continues into the 21st century where Beretta has evolved into a truly modern manufacturing company. Using modern techniques such as CNC machining, cold hammer forging, and the latest product design and testing technology every Beretta shotgun still has barrels and stocks fitted by hand to the gun. Each Beretta over and under is a modern engineered work of art.

Combining tradition with the newest technology resulted in a beautiful, accurate and elegant shotgun – the Beretta 690. Welcome to Beretta's perfect fusion of technology and tradition.

FEATURES

- ✓ Elegant game scene
- ✓ Beautiful oiled walnut
- ✓ Steelium alloy cold hammer forged barrels
- ✓ Optima HP Chokes for consistently excellent patterning
- ✓ Selectable ejection / extraction

SILVER PIGEON III

The Silver Pigeon III is the perfect balance between style and function. It offers all the features of the Silver Pigeon I, but its receiver is more lavishly engraved with scroll and game scenes. It also sports a golden Beretta medallion on the bottom of the receiver, as well as a German silver stock oval that the owner can personalize with his initials. Available in 12 gauge or in 28 gauge with our petite scaled-down frame.

686 SILVER PIGEON I

686 SILVER PIGEON I

With the Silver Pigeon I, the discriminating hunter gets a competitively-priced shotgun with plenty of the features of a Beretta premium gun. The boxlock receiver is light but extremely strong and its low profile greatly facilitates pointing; on the outside, it is engraved with a lavish scroll and floral design. The 686 Silver Pigeon I is also available in scaled-down 28-ga. and .410 action sizes, resulting in less weight and a smaller profile.

687 SILVER PIGEON

687 SILVER PIGEON V

The pinnacle of the Silver Pigeon line, this over-under is stocked in richly figured, oil-finished walnut and detailed with gold game bird inlays and a Beretta gold medallion under the action. The receiver is treated with Beretta's proprietary process that imparts a deep color-case finish while eliminating any metal distortion. Also available in three action sizes, this shotgun will be the point of pride in any hunter's collection.

687 EELL DIAMOND PIGEON

687 EELL DIAMOND PIGEON

In Italian, "EL" stands for "extra lusso" (super deluxe). The EELL designation takes that quality to an even higher level, and holding this shotgun will immediately reveal why. This over-under has the look, feel and prestige of a true classic. With its elaborately-engraved (hand-chased) full sideplates, figured walnut stock, as well as impeccable pointability and balance, it will always make a statement about its owner's refined taste.

486 PARALLELO

486 PARALLELO

The new 486 Parallelo conjures up images of grouse-hunts in the Scottish uplands, pheasant-hunts in Tuscany and other visions of the golden days of hunting. But while its looks bring back the best of yesterday, its functioning is all about tomorrow. Featuring Beretta's first round-body action, the 486 Parallelo was designed to be more reliable, safer and more accurate than any traditional side-by-side. The steel-shot-rated barrels sport corrosion-resistant Optimachoke tubes that allow the hunter to shoot any type of shell (including hi-performance), and the Triblock barrel technology eliminates any visible welding lines while making the barrels stronger. The lavishly-engraved action offers a super-crisp trigger release as well as an improved safety and an ejection/extraction selector. All this, together with the gun's premium walnut stock and butt pad, makes the 486 Parallelo a true jewel of craftsmanship that will last for generations.

Xtreme*The forecast calls for Reign***BLINK**4  in less than 1

70%
Reduction
in felt recoil!

KICK-OFF³

The only device in the world that acts on the second recoil peak.

Precise laboratory testing clearly demonstrated that recoil has two very distinct components: the explosion of the ammunition at the moment of firing (1st peak) and the impact of the bolt against the receiver at the end of its travel (2nd peak). Kick-Off³ is a third hydraulic dampener that targets the 2nd recoil peak. In doing this, even the stress on the mechanical components is notably reduced, increasing the service life of the gun.

//B-LOK

Fast-locking in a 60° rotation, the new B-Lok forend cap provides a perfect lock in just a fraction of a second!

**KICK /// OFF^M**

The world's most advanced recoil reduction, now MEGA! Kick-Off and Kick-Off³ have revolutionized the world of recoil reduction, bringing the performance up to -70%. Now Kick-Off goes MEGA, giving hunters the maximum of comfort and control together. With Kick-Off MEGA, the gun recoils parallel to the cheek mount. These combined systems result in a substantial reduction in muzzle rise and less recoil, allowing for better follow-up shot control.

A400 XTREME REALTREE® MAX-5® CAMO

A400 XTREME

Frigid rain, driving sleet, blinding snow and relentless salt spray—hardcore waterfowlers hunt in extreme conditions and so must their shotgun. We have designed the A400 Xtreme to incorporate all the features that experienced waterfowl hunters demand: the result is an extra-durable low-recoil shotgun capable of delivering 4 shots in less than 1 second while reliably feeding all commercially-available 12-ga. loads. Available in two camo patterns as well as black, the Xtreme is a never-quit piece of gear that will rule in the most demanding conditions imaginable.

A400 Xplor ACTION

A400 XPLOR ACTION

The new Beretta A400 Xplor Action is much more than a semi-auto that does everything well—it is the semi-auto that does everything by the highest Beretta standards. In designing the new A400 Xplor Action our goal was to make the world's most versatile shotgun even better. The result is light weight, low recoil, enhanced pointability, balance and ease of swing. The receiver also accepts scope mounts and features a special, super-protective anodized finish that gives this shotgun an unmistakable appearance.

A400
Xplor
UNICO

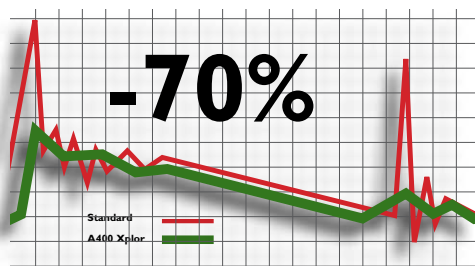

eXpect the uneXpected.

This shotgun represents all that is innovative about the A400 Xplor line. Built around a compact action, it is engineered to feed and shoot any 12-ga. shell—from 2 3/4" to 3 1/2" magnum—with the weight and balance of a high-performance 3" receiver. It is capable of firing 4 shots in less than 1 second, giving you the fastest follow-up shots on the market. Whether you hunt upland or in the marshes—or whether you are a sporting-clay aficionado, this shotgun will give you the unmatched performance possible with Beretta's 500-year experience in innovation.

KICK-OFF

KICK-OFF³

Kick-Off³ is the only recoil reduction system in the world that uses hydraulic dampeners very similar to those in automobile suspensions. All the other systems on the market are based on a the deformation of soft materials like rubber, polyurethane or polymer inserts. The difference? 70% less recoil than the nearest competitor.

A400 Xplor Unico is equipped with the best technological solutions in the world to increase performance, reliability and shooting comfort. Recoil almost reduced to zero, maximum muzzle rise reduction and perfect shouldering will be your best allies in guaranteeing a successful hunt every time.

A400 XPLOR UNICO

36% faster than any other shotgun.

The innovative Beretta gas operating system is 36% faster than any other operating system. Featuring a rotating bolt, new feeding system and a self-cleaning piston, the A400 Xplor possesses unmatched reliability, speed and performance.

The operating system of the A400 Xplor is a true jewel of engineering that distinguishes itself from all other systems on the market with its exceptional cycling speed. Being the fastest to shoot follow-up shots means increasing your chances of hitting the target. With an A400 Xplor anything is possible.

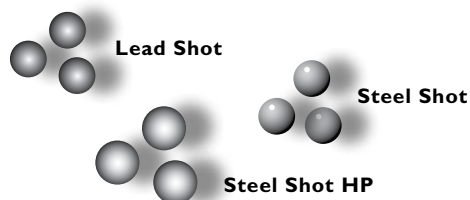

UNICO

The versatility to shoot 2¾" to 3½" loads through a gun with the weight and balance previously found only on a high-performance competition shotgun.

Shot pattern remains perfect and uniform in every type of hunting situation.

Optima-Bore HP geometry was conceived to offer the best ballistic performance available even with steel shot. The shot pattern remains perfectly uniform whatever the shell size or load. Optima-Bore HP choke tubes further enhance the effect.

FIELD CHOKES

MOBILCHOKE

These choke tubes are factory OEM replacements for shotguns with the Mobilchoke system.

Beretta Mobilchoke tubes are available in two versions:

- Internal for 12, 20, 28, and .410 Gauge
- Extended length +25mm and +50mm for 12 Gauge

They have been designed to resist stress and ensure long durability. Treatments to which they have been subject protect them against corrosion.

OPTIMACHOKE® HP

Beretta OptimaChoke® HP tubes stand up to the heat of competition. Manufactured from high strength steel and finished in a nickel-alloy coating, these chokes guarantee significant corrosion resistance and have the ability to withstand the rigors of steel shot. OptimaChoke® HP tubes are fully interchangeable on all Beretta barrels that are threaded for OptimaChoke® HP.

WHY DO OLYMPIC MEDALISTS, WORLD AND NATIONAL CHAMPIONS AND COMPETITIVE SHOOTERS ALL AROUND THE WORLD CHOOSE TO SHOOT BERETTA?

RECEIVER: The walls of a Beretta receiver are more than twice as thick as many of its competitors, (in fact it is also the platform for double rifles, which create much greater pressures than experienced in any shotgun). Using easily replaceable hinge pins and locking lugs, any receiver can be completely rebuilt allowing the gun to be refurbished for another lifetime of reliable service.

PROFILE: Thanks to the superior design of the receiver, a Beretta over-and-under has an incredibly solid feel. The dual-conical locking system provides a vaultlike lockup that — with its self-tightening design — stays tight over the life of the gun. Because the lugs are located high on the receiver, the lock-up is also significantly stronger than on ordinary guns. In addition, the location of the lugs allows for a low-profile receiver with the barrels sitting deeper than normal. This in turn aligns the sighting plane closer to the hands, aiding in the reduction of felt recoil and muzzle rise.

BARRELS: For more than five centuries, Beretta has made the best barrels in the world. Today, their over-and-under barrel starts life as a unique proprietary blend of steel, chromium and molybdenum. Forged in Northern Italy, Beretta barrels are deep-hole drilled, cold-hammer forged, and chrome lined, allowing for more concentric tubes. The result: a thinner, lighter, more precise barrel wall. This superior barrel construction delivers better weight distribution and an optimum balance point just above the hinge pin, which gives it perfect swing characteristics.

DT11 Sporting

HISTORY: Five hundred years of craftsmanship and tradition go into every shotgun Beretta builds. Nowhere is this more evident than in their celebrated over-and-unders, shotguns many consider the strongest and most reliable in the world. A Beretta over-and-under can rightly be considered an heirloom and inspires a fierce and loyal following. One faithful shooter has more than 700,000 documented rounds fired through his 687 EELL Sporting; both gun and shooter are still going strong.

OPTIMA-BORE® and OPTIMA-CHOKE®: All Beretta competition shotguns feature back-bored barrels, which greatly reduce felt recoil. The Optima-Choke® HP competition choke tubes are longer and slimmer, with an internal profile formed to enhance the concentration and distribution of the shot pattern. The bottom line is increased comfort, less fatigue and more broken targets.

DT 11 The champions' choice.

STEELIUM PRO

The DT11 is treated as a Premium shotgun during all phases of production, with an attention to detail that makes each gun unique. At the heart of the DT11 is a super-tough cross-bolt action, a whole 3mm wider than its predecessor's (the DT10) and accordingly stronger. Breaking at a crisp 3 ½ lbs, the trigger virtually eliminates all muscular interference with your natural swing—meaning less fatigue and more shattered clays. The DT11's impeccable balance is enhanced by a low center-mass coaxial with the bottom barrel, greatly reducing muzzle rise. The select high-quality walnut is hand-finished according to the shooter's preferences (oil, Tru Oil or wax), while the measurements can be tailored to the customer's specifications. A serious gun for the serious competitor, the DT11 was born and bred to keep you on target.

Special finishing on the fences, finely engraved by hand, reduces glare while shooting.

DT11 TRAP**WHEN THE GEOMETRY MAKES a DIFFERENCE****NEW BERETTA STEELIUM PRO BARRELS.**

No one has dedicated as much care and experience in the selection of barrel steel as Beretta. Steelium barrels result from a production process that transforms the special tri-alloy steel into an exceptional barrel. The deep drilling, cold hammer forging and special vacuum distension causes the steel to acquire the ideal characteristics, thereby offering the best ballistic performance. Steelium Pro takes the standard Steelium barrel one step further by lengthening the forcing cone (480mm total length) and improving bore dimensions to reduce recoil and muzzle rise. The result: improved pattern performance that allows the DT11 to achieve superior target crushing, shot after shot.

A NEW LOOK

The receiver is as super-tough on the inside as it is attractive to the outside. In line with the "professional" purpose of the DT11, we have only embellished the receiver by contrasting matte finish and mirror polish to highlight the lines of the action.

STABILITY WHILE SWINGING

The overall 3mm increase in side wall thickness adds strength and enhances balance.

- Developed according to the demands of the world's top professional shooters, the top lever improves the grip, reduces stress and provides more comfort for left-handed shooters
- The shape of the safety selector has been redesigned for a better grip and smoother operation
- Newly designed bridges are internally hollowed, while the side ribs are windowed to improve barrel balance and help dissipate heat.

- 1 NEW TOP RIB WITH HOLLOWED BRIDGES
- 2 JEWELLED SATIN FINISH
- 3 NO-GLARE FINISH
- 4 NEW ERGONOMIC TOP LEVER

- 7 NEW NICKEL-BASED FINISH WITH WRITINGS AND DETAILS IN BLUE

692

EXCLUSIVE BERETTA STEELIUM PLUS BARRELS

The 692 is the “wild child” of our shotgun lineup: while in line with its 500-year-old tradition, it sports some cool and radical features that make it unique—and uniquely effective. Its action falls in between our super-thick DT11 and the trimmer 680 series, while featuring its own double scalloping and futuristic locking shoulders. The Steelium Plus barrels have an extra-long conical profile, greatly reducing muzzle rise and felt recoil while keeping patterns consistent. Other features include adjustable trigger and ejection/extraction, a tasteful palm-swell in the grip and a new soft-touch technopolymer opening lever. Also available with the B-Fast system that allows you to easily modify the point of balance, the 692 is a shotgun that lives to break clays, but that would not be out of place for the occasional bird-hunt.

B-FAST COMB

NEW OPENING LEVER

ADJUSTABLE TRIGGER

41.6mm Wide Receiver

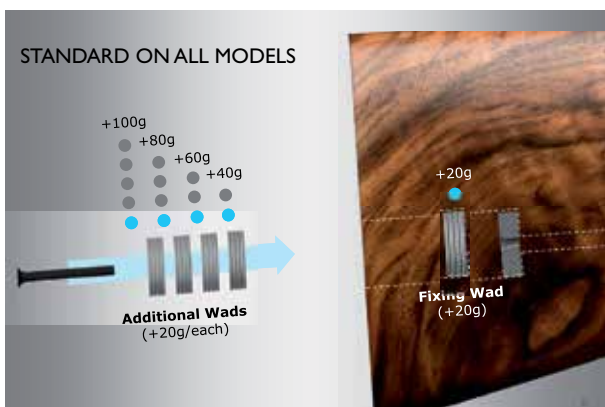

- Improved balance
- More stability before and after the shot
- Better Shouldering
- Faster target acquisition

- Less Recoil & Muzzle Raise
- Higher Precision
- Better Pattern
- Faster target acquisition on second shot
- More probability to hit the target

B-FAST BALANCE SYSTEM

BERETTA B-FAST BALANCE SYSTEM

Acronym of "Beretta Fast Adjustment System Technology", B-FAST is a system combining modular adjusting devices specifically designed for Beretta shotguns. B-Fast Balance - It is a brand new solution that allows to adjust the balance of the shotgun in a very simple way. The system allows to customize the balance by mounting additional steel wads into the stock. The system is extremely effective: the weight wads are placed as far as possible from the hinge pins, allowing the maximum balance correction for every unit of weight added to the stock.

- ✓ Allows control of the shotgun balance with the lowest overall weight increase
- ✓ Easy to use
- ✓ Balance adjustment with the minimum impact possible on shouldering

SELECT MODELS ONLY

The Beretta 692 is available with the optional new, fully adjustable stock B-Fast (Beretta Fast Adjustment System Technology). This device allows a complete drop and cast stock adjustment with extreme ease and quickness. The new adjustable comb is entirely made of a light alloy and features robust stainless steel supports, in order to deliver the maximum strength and durability.

ADJUSTABLE EJECTION EXTRACTION

687 SILVER PIGEON III SPORTING

At the core of the 687 Silver Pigeon III Sporting is our legendary 687-series receiver. This low-profile, positive-locking, low-maintenance action ensures that your off-hand stays as close as possible to the bore-axis; in this manner, whatever you point to is exactly where the shot goes. The receiver is embellished with a scroll and game scene designed by our most experienced Master Engravers in Gardone, Italy. The way this pattern is executed on the receiver makes it virtually as striking as if it had been hand-engraved, but without the price tag to match.

687 EELL DIAMOND PIGEON SPORTING

One of the most elegant, finely balanced and responsive double barrel shotguns in the world, the 687 EELL Diamond Pigeon 12 gauge is the epitome of luxury and performance for the competitive shooter. Beretta's extensive hand-chased engraving and highly figured select walnut set this shotgun apart from all others. It is just like the field version in every luxurious detail, but with the added benefit of a wider rib for better target acquisition.

Like a beautiful painting on canvas, the EELL Diamond Pigeon's sideplates are exquisitely engraved with a floral scene. Engravings are subject to change.

SILVER PIGEON I

686 SILVER PIGEON I

The Silver Pigeon I marks the dividing line between Beretta's more economical double guns and the highly decorated luxury models. While popularly priced, it offers the aesthetics and materials of the premium over-unders. The frame has extensive, but refined, floral and scroll decoration that will make this shotgun a source of pride for years to come.

A400 Xcel

THE BLUE RECEIVER IS ONLY A WARNING: WHEN YOUR OPPONENTS SEE IT, THEY'LL ALREADY KNOW WHO THE WINNER IS.

A400 Xcel Parallel Target

MICRO CORE: A further step forward in performance - soft, light and able to slide during shouldering Micro-Core is an innovative recoil pad developed by Beretta thanks to its experience matured over decades on the competition fields around the world.

Thanks to the open cell technopolymer, softer, lighter and more slippery than rubber, micro-core expands gradually and instantly, increasing its surface area on the shoulder and giving the shotgun secure and precise support.

BALANCE CAP: Utilizing up to three interchangeable weights, the balance cap system allows the shooter to achieve that perfect point where the shotgun becomes but an extension of them. A blue anodized finish on the 2.5 ounce cap (included) protects the system from the elements allowing the shooter to compete anytime anywhere. Optional balance caps in 5 and 7.5 ounce.

GUN POD: A digital display allows you to always have everything under control. This revolutionary system provides a digital readout of the ambient air temperature, the cartridge pressure of the round fired and the overall number of rounds fired through the shotgun.

STEEL PERFORMANCE: The special Optima-Bore® HP geometry was conceived to offer the best performance, even with steel shot. The shot pattern remains perfect and uniform in every type of hunt, complemented by the use of the Optima-Choke® HP choke tubes.

HIGH SPEED MECHANICS:

Blink is the new "engine" of the A400 Xcel, the fruit of the integration of the new Beretta gas system, the rotating bolt head lock-up and a new feeding system.

A400 XCEL

Warning: here comes the blue shark of the clay range--a creature that has evolved to rule in its element and that spells bad news to anyone trying to go against it. And bad news it really is: with the fastest-cycling action on the market, the best cold-hammer forged barrels made today (featuring the Optima-Bore HP), customizable point of balance and an advanced recoil-reducing system, it will never fail to devour the competition.

CHOKES

These Optima-Choke tubes are available in internal and external versions for 12 gauge shotguns. They are longer and slimmer than conventional Mobilchoke tubes. Thanks to the elongated cone they minimize pellet deformation and improve shot patterns. The various versions are fully interchangeable on 12 gauge guns with Optima-Bore barrels. These choke tubes are for 12 gauge shotguns with the Optima-Choke system only.

Beretta Optima-Choke HP tubes stand up to the heat of competition. Manufactured from high strength steel and finished in a nickel-alloy coating, these chokes guarantee significant corrosion resistance and have the ability to withstand the rigors of steel shot. Optima-Choke HP tubes are fully interchangeable on all Beretta barrels that are threaded for Optima-Choke HP. The various versions are fully interchangeable on 12 gauge guns with Optima-Bore HP barrels. These choke tubes are for 12 gauge shotguns with the Optima-Choke HP system only.

These chokes are for 12 gauge shotguns only. This new competition choke fits Optima-Choke Competition 12 gauge shotgun barrels. Features carefully-designed ports to reduce felt recoil.

The tube length extends 25mm past the muzzle to provide easy installation and removal without specific tools. Each choke tube is color coded with a durable metal alloy band for quick identification of the constriction during competition.

These Competition chokes can be used on all Mobilchoke barrels. Made of high quality steel, they have great stress resistance due to heat treatments. They are subjected to a special coating that guarantees high protection from corrosion. They are extended by 25mm-0.98" and their external shape has been studied in order to guarantee installation and removal without specific tools. The end of the choke is identified by a colored alloy stripe for fast and easy indication of the constriction.

SHOTGUN ACCESSORIES

BERETTA MICRO-CORE FIELD RECOIL PAD

SOFT, LIGHT AND FITTABLE! A further step forward in performance. Soft, light and able to slide during shouldering. MICRO CORE is an innovative recoil pad developed by Beretta thanks to its experience matured over decades on competition fields around the world. The open cell technopolymer is softer, lighter and more comfortable. MICRO CORE expands gradually and instantly, increasing its surface area on the shoulder and giving the shotgun secure and precise support.

GEL-TEK CHEEK PROTECTOR 6MM. .24" (E00489)

Beretta has an exclusive on this item and it is so unique! Features and Benefits:

- ✔ The pad can be moved from gun to gun and put back into the package for use later.
- ✔ It can be used on slug guns or trap guns if a shooter needs to raise the comb or point of impact.
- ✔ It can be put on wood or synthetic stocks.
- ✔ It eliminates the bruised cheeks that trap shooters sometimes get.
- ✔ It is opaque in color so you can still see the stock through it.
- ✔ It can be put on hundreds of stocks and will still work.
